

Brand Reference

Voltara Digital · assets, colour and type for the website redesign

Every value here is read from what is actually in the repository and live on volaradigital.com, not from memory. All eleven hex values are verified against `src/app/globals.css`. Where a value is disputed, it says so.

1. Logo assets

voltara-mark.png

512 x 442

Primary mark. Transparent. Not square, about 1.16:1.

VOLTARA
DIGITAL

voltara-wordmark.png

680 x 174

Recoloured light for dark backgrounds. Transparent.

voltara-logo-full.png

1254 x 1254

Lock-up. OPAQUE, so it needs its own background.

src/app/icon.png

512 x 512

High-resolution icon. Generated.

src/app/apple-icon.png

180 x 180

iOS home screen. Opaque by design.

Two things to watch. The mark is **512 x 442, not square**, so anything assuming a square logo needs padding rather than a stretch. And `voltara-logo-full.png` is **opaque** unlike the other two, so it only sits cleanly on its own background.

Icons are generated by `scripts/build-icons.py` from the mark. Re-run it after any logo change rather than editing them by hand.

2. Colour

The brand gradient

```
--brand-gradient: linear-gradient(120deg, #8ae04b 0%, #34c7c9 50%, #1e8fe6 100%);
```

Helpers already in `globals.css`: `.text-gradient`, `.bg-brand-gradient`, `.border-gradient`.

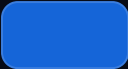

Brand colours

#8ae04b

--color-brand-green

Gradient start. Lime green.

	#34c7c9	--color-brand-teal	Gradient middle. Selection and glow.
	#1e8fe6	--color-brand-blue	Gradient end. Links in prose.
	#1565d8	--color-brand-blue-deep	Pressed and hover states.

Surfaces

The site is dark by default. There is no light theme.

	#070b16	--color-bg	Page background
	#0b1222	--color-bg-soft	Inset panels, form fields
	#0e1626	--color-surface	Cards
	#131d31	--color-surface-2	Raised cards, hover
	#1e2a44	--color-line	Borders and dividers

Text

	#e9eef7	--color-fg	Body text. Off-white, not pure white.
	#93a3c0	--color-muted	Secondary text, captions

Effects already defined

::selection	Teal at 30 percent, rgba(52,199,201,.3)
.glow-radial	Behind hero and CTA. Teal 22 percent through blue 12 percent to transparent.
.bg-grid	56px grid, slate at 6 percent
.animate-fade-up	14px rise over 0.7s. Already disabled under prefers-reduced-motion.

3. Type

Three families, all loaded through next/font/google in src/app/layout.tsx, so they self-host and there is no external font request.

Geist	Body copy. The default on body. Confirmed in use. --font-sans
Space Grotesk	Every heading, via font-display. Confirmed in use. --font-display
Geist Mono	Not actually used. Preloaded on every page, never rendered. --font-mono

Geist Mono is dead weight. Three woff2 files are preloaded on every page, about 75 KB in total, and one of them is never rendered: font-mono appears 0 times in the source and 0 times in the served HTML, and blog code elements fall through to Tailwind's default mono stack instead. Either use it deliberately in the redesign or drop it from layout.tsx and save roughly 22 KB and a preload on every page.

Only Space Grotesk declares explicit weights. If the redesign needs a specific Geist weight, add it to the Geist({...}) call rather than assuming it is loaded.

4. One conflict to resolve

The marketing playbook lists different brand colours and different type from the live site. I sampled the actual logo artwork to settle which is truer to it, measured as RGB distance from the nearest colour genuinely present in the mark.

COLOUR	PLAYBOOK	DISTANCE	LIVE SITE	DISTANCE
Green	#52B331	15	#8ae04b	10
Cyan / teal	#2FB4E0	14	#34c7c9	12
Blue	#2563EB	30	#1e8fe6	12
Navy	#0A1B33	—	#070b16	—
Type	Poppins	—	Geist + Space Grotesk	—

Recommendation: keep the site palette and correct the playbook. The site values are a near-exact sample of the logo; the playbook's are approximations, and its blue is visibly flatter and more indigo than anything in the artwork. The exception is if the redesign is deliberately moving the brand somewhere new, in which case both documents change together.

Poppins versus Geist is a taste decision rather than an accuracy one. Poppins is geometric and reads friendlier and rounder; Geist with Space Grotesk reads more technical. Worth settling before the redesign starts, because it changes every page.

5. Quick copy-paste

```
/* Brand */
--brand-green:      #8ae04b;
--brand-teal:       #34c7c9;
--brand-blue:       #1e8fe6;
--brand-blue-deep:  #1565d8;
--brand-gradient:   linear-gradient(120deg, #8ae04b 0%, #34c7c9 50%, #1e8fe6 100%);

/* Surfaces */
--bg:               #070b16;
--bg-soft:          #0b1222;
--surface:          #0e1626;
--surface-2:        #131d31;
--line:             #1e2a44;

/* Text */
--fg:               #e9eef7;
--muted:            #93a3c0;
```

Fonts: Geist (body), Space Grotesk (headings), Geist Mono (code).
